EduSaga 360 Release Notes

Post-P4 patch — canonical role catalogue, HR & payroll dashboard refresh, attendance→payroll cycle schema alignment, employee PII save fix, and navigation wired to live role permissions. Builds on `v0.3.0-p4`.

PRIOR RELEASE

v0.3.0-p4

REPOSITORY

Edusaga360-v1.0

BRANCHES

DEV → Stg → Prod

MIGRATIONS

3 new

Summary

This patch replaces hard-coded role lists with a **26-role system catalogue** (backend seed + `GET /api/roles`), refreshes the **HR Manager** and **Payroll** dashboards with KPI hero layouts, fixes the July attendance→payroll API drift (missing tables/columns), keeps employee PII readable after save, and restores legacy `createJournalEntry` posting for finance flows.

Features & fixes

Roles & access control

- New `/api/roles` CRUD with system-role protection and tenant-scoped custom roles
- `appRoles.ts` catalogue synced with sidebar module keys and action permissions
- User Management & Role Management pages consume live catalogue (Arabic/English labels)

- Sidebar navigation filtered by role module access from API

HR & Payroll UI

- HR Manager Dashboard: hero, workforce mix, priority actions, demo-tenant banner
- Payroll Dashboard: KPI strip, period-aware pay-run list, improved run details
- Employees page layout aligned with new HR metrics helpers

Payroll engine

- Attendance rows paginated (1k pages) so 10k-employee months are not truncated
- Attendance load failures now fail loudly instead of zeroing deductions
- Graceful fallback when `attendance_policies` table is absent
- `POST /api/functions/createJournalEntry` compatibility route for GL posting

Build fix

- Removed stray brace in `WorkforcePlanning.jsx` (Vercel build blocker)

Code review

AREA	VERDICT	NOTES
Roles API	Approved	RLS read-only for clients; writes via service role; reserved codes blocked; 5 unit tests pass
Migrations	Approved	All additive; dedup before unique index; PostgREST reload included
PII trigger	Approved	Encrypts to <code>*_enc</code> columns but keeps plaintext for HR UI; best-effort on vault miss
Frontend lint	Pre-existing	6 unused-import warnings in unrelated files; none in this patch's core HR/roles paths
Parent mobile	Excluded	Local parent-mobile WIP not included in this promotion

Database migrations

```
20260902_attendance_payroll_cycle_fix.sql
```

```
20260903_app_roles_catalog.sql
```

```
20260903_employee_pii_keep_plaintext.sql
```

Apply all three on Supabase before validating attendance import and payroll run in staging.

Test evidence

SUITE	RESULT
backend/src/__tests__/roles.test.ts	5/5 passed

Deployment checklist

- Run migrations on target Supabase project
- Verify `GET /api/roles` seeds 26 system roles
- Smoke-test HR dashboard, payroll run create, employee bank/IBAN save
- Confirm sidebar modules match assigned role (e.g. hr_admin vs teacher)
